SERVICE INSPECTION CERTIFICATION

Name of PWS: Mountain Peak S.U.D.

PWS ID# 0700042

Location of Service: _____

NOTICE TO HOMEOWNERS AND PLUMBERS

Mountain Peak S.U.D. (hereafter called Utility) hereby notifies all plumbers and homeowners that all public water systems in the state of Texas must comply with the rules and regulations of the Texas Natural Resource Conservation Commission concerning the construction and renovation of and addition and modifications to private water distribution facilities.

This Utility has adopted Uniform (an adequate plumbing code, regulations, or service agreement) as the prevailing guide for plumbing facility construction and modification standards, particularly regarding the prohibition of the use of lead solder and fittings and the prohibition of cross-connections within the private water distribution facility. By execution of this document, the homeowner and plumber do hereby certify that the private water distribution facilities connected to the aforementioned public water supply meets, to the best of their knowledge:

- (1) No direct connection between the public drinking water supply and a potential source of contamination exists. Potential sources of contamination are isolated from the public water system by an air gap or an appropriate backflow prevention assembly in accordance with commission regulations.
- (2) No cross-connection between the public drinking water supply and a private water system exists. Where an actual air gap is not maintained between the public water supply and the private water supply, an approved reduced pressure-zone backflow prevention assembly is properly installed and a service agreement exists for annual inspection and testing by a certified backflow prevention device tester.
- (3) No connection exists which would allow the return of water used for condensing, cooling or industrial processes back to the public water supply.
- (4) No pipe or pipe fitting which contains more than 8.0% lead exists in the private water distribution facilities installed on or after July 1, 1988.
- (5) No solder or flux which contains more than 0.2% lead exists in private water distribution facilities installed on or after July 1, 1988.

Water service shall not be provided or restored to your private water distribution facility until the above conditions are determined to be in compliance with TNRCC's rules and regulations. This document will be retained as a part of the utility's permanent files along with all water distribution facilities inspection documents. By execution hereof, we certify that the foregoing is true and correct and that we are legally responsible for the validity of the information we have provided. We also understand that the utility can inspect this private water distribution facility and we, the homeowner and plumber, shall be present to demonstrate compliance.
